

It's simple:

Place **HYDROBOX** in a container filled with water. Water should be soft, from the tap or rain water. Wait for **HYDROBOX** to soak through completely.

Place the soaked **HYDROBOX** on the bottom of the flower pot or hole in ground. Before planting loosen the root system.

Set the plant in the pot or hole, so that its roots lean over **HYDROBOX**. Hold the plant delicately, while filling the hole with soil, pressing it slightly at the same time.

Water soil thoroughly around the plant. Use of **HYDROBOX** allows to extend the periods between watering up to 3 times and to reduce use of fertilisers.

Manufactured based on the license granted by the Natural Science University of WROCLAW. Patent number PL 211198. Attestation of the National Institute of Hygiene, certificate No. PZH/HT-2625/2012.

HYDROBOX
WATER SORBING GEOCOMPOSITES

What is HYDROBox?

HYDROBOX is an innovative, patent protected solution that allows to fully enjoy the beauty of vegetation. Thanks to its patented structure, **HYDROBOX** collects water, which is gradually used by plants. This allows for easier maintenance of home and garden vegetation in good condition, even during periods of droughts or while on holidays.

HYDROBOX of various sizes can be placed in container or in ground for water retention. They may be applied for:

- flowers, potted plants on balconies
- garden shrubs, perennials
- hedges and vines
- ornamental and fruit trees
- strawberry, raspberry bushes, etc.
- vegetables and herbs

- **HYDROBOX** allows to save time, water, fertilisers and to enjoy the beauty of vegetation.
- **HYDROBOX** protects plants during periods of droughts, supplies water when it is needed the most.
- **HYDROBOX** is a result of 7 years of research works. More than 30 Polish scientists contributed to development of the product.

HydroBox HOME is a line of products dedicated for plants in pots. Noticeable improvement of plants' condition with less intensive watering and fertilisation.

HYDROBOX should be about the size of plant's root block.

APPLICATION:

HYDROBox HOME S – pots up to 1.5 litre (0.33gal)

HYDROBox HOME M – pots up to 2.0 litres (0.43gal)

HYDROBox HOME L – pots up to 2.5 litres (0.55gal)

HYDROBox HOME XL – pots up to 3.5litres (0.7gal)

without HYDROBox

with HYDROBox

after applying HYDROBox

after 4 months with HYDROBox

HYDROBOX stores water thanks to the SAPs. These polymers are able to retain large amounts of water.

HydroBox GARDEN designed for use in gardens by houses or in allotment gardens. Facilitated planting and care for vegetation. Ideal for shrubs, conifers, perennials, trees, etc..

GARDEN – available capacities from 320cm³ to 6,000cm³. **HYDROBOX** should be about the size of plant's root block. For bigger plants two or more **HYDROBOX** can be applied.

form	vol. [cm ³]	application
	320	young perennial and flowers, vegetables with low water demand
	650	perennial, little shrubs, tomatoes, chrysanthemums
	1300	larger bushes, young trees, big pots
	2500	trees and shrubs with fibrous roots
	3200	trees and shrubs with tap roots, vines hedges
solo pipe 20 cm 	600	balconies, terraces, vegetables
solo pipe 40 cm 	1200	balconies, terraces, vegetables
solo pipe 100 cm 	2800	berries (strawberries, raspberries, etc.), grapevines, vines, hedges
dual pipe 100 cm 	6000	large vines and hedges, grapevines
